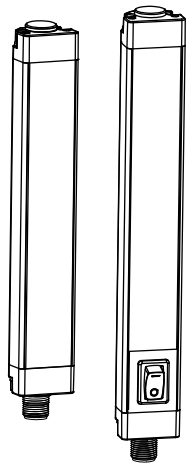
WLS28-2 UV LED Strip Light

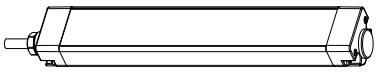
Datasheet



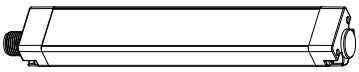
Banner's WLS28-2 UV LED Strip Lights have sturdy aluminum housings, shatterproof windows, and impressive environmental ratings, making them a cost-effective operator inspection light or machine vision light to improve and enhance contrast in UV fluorescent and non-fluorescent applications.

- UV 365 nm and 395 nm wavelength models available for diverse applications
- Low-profile, space-saving design
- Rugged, water-resistant IP69K option
- Available in four lengths from 285 mm to 1130 mm (11.22 in to 3.7 ft)
- Lensed models available on UV395 models
- Daisy chain power to multiple lights
- Safe for long-term worker operation
- Optional snap clips for easy installation and repositioning
- Capability to dim lights using the wiring pinout (Hi/Lo/Off)
- Optional switch is now Hi/Lo/Off
- Automatic temperature protection built into the unit. Above 50 °C, the light dims to manage heat and protect product lifetime
- PWM models can be used for strobed operation

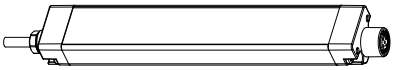
Note: When cascading lights, a model with an ON/OFF switch can be used to control the lights cascaded off the switched model.



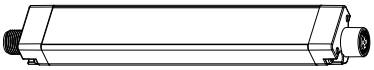
Stand-Alone Light—cable



Stand-Alone Light or End Light in a Cascade—QD



First Light in a Cascade—cable



First or Middle of a Cascade—QD

These Work Light Strips are available as either stand-alone models, or as cascade models that can be "daisy-chained" together for a continuous length of lighting, with a minimum of wiring.

Stand-alone models have cable or male quick disconnect (QD) at one end for power connection and no connections at opposite end. A stand-alone model may be used as the last in the cascade series.

Cascade models have cable or male quick disconnect (QD) at one end for power connection and a female quick disconnect (QD) at the opposite end for connecting to other lights in the cascade. Cascade models with cable end can only be used as the first light in the cascade series. A double-ended accessory cordset must be used between each pair of lights in a cascade.

Application Note
When connecting cascadable lights in series at 100% intensity, it is important not to exceed maximum current limitations:
Maximum length of light at 12 V dc: 1.4 m (4.6 ft)
Maximum length of light at 24 V dc: 3.0 m (9.8 ft)
Maximum length of light at 30 V dc: 3.1 m (10.2 ft)
At 50% intensity, double the lengths.

Note: Do not spray cable with high-pressure sprayer, or cable damage will result.
