

2 directional terminal block system useful for installation

- Long range detection, 40 m through-beam type (universal voltage type)
- Types with built-in ON/OFF delay timer available

For technical & application support or if you are ready to order - contact Ramco today!

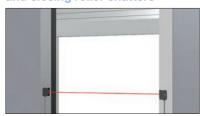

Detection of large package passage

Detection of metal can passage

Object detection when opening and closing roller shutters

Selection table

Туре		Shape	Sensing distance	Model (Types with timer functions shown in parentheses)	
Universal voltage	Through- beam		40 m	VT-4000 (VT-4000T)	
	Retro- reflective		0.01 to 10 m	VR-1000 (VR-1000T)	
	Diffuse- reflective		1.3 m	VD-130 (VD-130T)	
			3 m (infrared light)	VD-300 (VD-300T)	

	Туре	Shape	Sensing distance	Model (Types with timer functions shown in parentheses)	
				NPN type	PNP type
DC power	Through- beam		30 m	VT-3000N	VT-3000P
	Retro- reflective		0.01 to 8 m	VR-800N	VR-800P
	Diffuse- reflective		1 m	VD-100N	VD-100P
			2.5 m (infrared light)	VD-250N	VD-250P

Options/Accessories

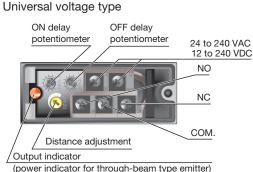

Photoelectric

Sensors

Universal voltage/Terminal block type

Universal voltage types are also available, eliminating the need to choose between voltages. Can be used with voltages around the world.

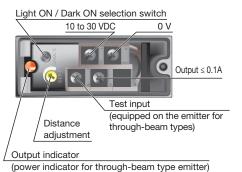

(power indicator for through-beam type emitter)

*ON delay potentiometer and OFF delay potentiometer are only equipped on models with timers

DC power type

Equipped with timer function

(Universal voltage type model equipped with timer)

Equipped with two timer functions. The OFF delay for extending the time until OFF and the ON delay for switching ON when detecting after more than a set period of time. The timer time can be set for between 0.1 and 10 seconds and the ON delay and OFF delay can be set at the same time.

Mirror surface detection (retro-reflective type)

Built-in polarizing filter for optical surfaces. Clearly differentiates between reflected light from the reflector and reflected light from the workpiece. Allows stable detection of mirror surfaces such as for plating and metal objects.

2-direction cable connection

On types with one-direction cable connections, it is necessary to be careful about the routing of the cable. With the V series, routing is possible from both the bottom and rear. This is a logical design that not only makes routing easy, but removes cable stress.

I/C

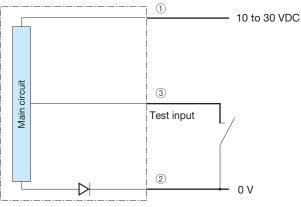

I/O circuit diagram

■ NPN output type (DC power type)

Terminal block type V series

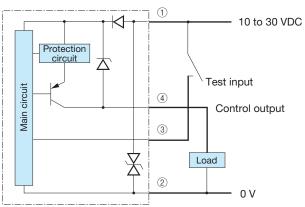

■ Through-beam type emitter (NPN. DC power type)

*PNP/DC power type emission stoppage is shorted with 10 to 30 VDC.

■ PNP output type (DC power type)

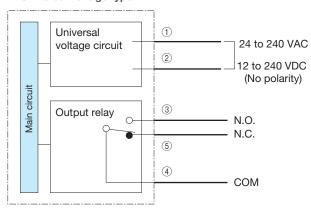

Connecting

■1 to 4 are connector pin No.

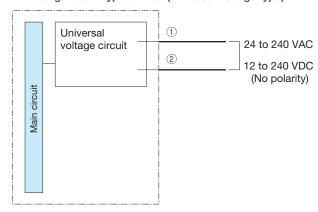

Notes

- ■When using a switching regulator for the power supply, be sure to ground the frame ground terminal.
- Avoid wiring in parallel with or in the same piping as high-voltage wires or power lines. Doing so may lead to malfunctions caused by noise. Also, shorten the power supply and signal wires as much as possible.
- ■Avoid using the transient state while the power is on (approx. 100 ms).
