

### Programmable Controller

FP0R SERIES

# The New Standard of Ultra-compact PLCs

NEW

**Equipped with RS485 Port** 

Largest in its class \*1

**Large Capacity Program and Data Memory** 

Fastest in its class \*1

**Ultra-high Speed Processing** 

Multi-axis Control available without Expansion

(Industry's First \*2)

Battery-less Automatic Backup of All Ďata

Our Mission is to Maximize Customer Benefits with Enhancing Advanced Functionality and Performance.

The Answer is FPOR, Superior to Basic Ultra-

#### Smallest in its class \*1

The control unit is small at 90 mm 3.54 in in height and 25 mm 0.98 in in width. Even when expanded with three expansion units, the total width only 100 mm

The ultra-compact space-saving body size facilitates the miniaturization of target machines, equipment, and control panels.

### Multi-axis (4-axis) control is available without expansion units.

The built-in 4-axis pulse outputs allow multi-axis motor control without positioning units or other expansion units.

## **Outstanding Products**

Worldwide simultaneous launch of the 3-year warranty For details, visit the following website:

panasonic-denko.co.jp/ac/e/fasys/warranty

### compact Models.

3.94 in.

#### Industry's First \*

### **Battery-less automatic backup of** all data

The F type (FP0R-F32) has a built-in FeRAM, which is a cutting-edge device that allows the automatic saving of all data without a backup

- There is no need to worry about data loss after a long vacation.
- Battery replacement is no longer necessary when shipping or transferring the unit overseas.
- Replacement of equipment and restoration of idle equipment is easy.
- The unit can be powered off flexibly on weekends or at other non-operating times, promoting energy saving
- \* Based on our research as of July 1, 2011

#### **NEW**

### **Equipped with RS485 port**

Up to 99 units can be connected, expanding applications for the eco-conscious business field.

The PLC link is available with up to 16 other FP series and FP0R units.

#### Fastest in its class \*1

### **Ultra-high speed processing**

Ultra-high speed: 80 ns/step (ST instructions)

\* Within a range of 0 to 3,000 steps. Processing of the 3,001st and later steps is 580 ns, 1.5 times faster than the conventional model

Note: Unit expansion increases the base time.

Base scan time:

I/O refresh + base time

Without expansion units: 0.2 ms or less

With expansion units: 0.2 ms or less + (1 x Number of expansion units) ms

### Large capacity independent comment memory

Program maintenance and management become easier.

#### USB tool port provided as standard equipment

Programming work becomes simpler, easier, and quicker, improving the production efficiency.

### **Full-fledged positioning functions**

A variety of dedicated instructions enable high-accuracy positioning

#### Largest in its class \*1

### Large capacity program

Program capacity: 32 k steps \*2 Data register: 32 k words \*2

Among compact PLCs with up to 128 I/O points based on our research as of July 1, 2011

\*2 C10, C14 or C16 control unit: Program capacity of 16 k steps and data register of 12 k words

### **POSITIONING**

#### ■ Jog positioning control (F171 instruction)

The motion can be started without a preset target value. When a stop signal is input, the target value is set, and the motion is slowed to a stop.

#### Changing the speed (available for F171 and F172 instructions)

The target speed can be changed by an external signal input during the jog operation or trapezoidal control operation.

#### ■ Built-in 4-axis pulse outputs (Transistor output type)

### Two sets can simultaneously undergo two-axis linear interpolation.

No complicated speed calculation or programming is required. Two-axis linear interpolation is available by using the F175 dedicated instruction. Two sets such as two X-Y tables, for example, can be simultaneously controlled.

#### ■ Built-in multipoint PWM outputs (4 channels)

The pulse output port of FP0R can also serve as a PWM output port. One of the application examples is an analog voltage output, which can be used for inverter speed control.

### ■ Individual settings for acceleration and deceleration (available for F171, F172, and F174 instructions)

The acceleration time and deceleration time can be individually set.

# Labelers: Starting the operation at a relatively low acceleration to prevent tape from breaking Stopping the operation at high deceleration when detecting the label end to save the tape Lifts: Optimizing the acceleration and deceleration during ascending and descending transfers.

#### ■ Measuring the pulse frequency (F178 instruction)

Pulses input in a specified period by a single instruction are counted, and the frequency is calculated.

#### ■ High-speed counters and pulse outputs

speed of conveyor 1, which is inverter-controlled, is measured based on the encoder pulse count, and pulses are output to the slave motor (for jog operation) according to the measured speed in order to synchronize the speed of conveyor 2.

Inverter

### **NETWORK**

#### **■ PLC link (MEWNET-W0)**

Contact data can be shared among up to 16 PLC units, including FP0R, FPΣ, FP-X, FP2/FP2SH, and a mixture of them, without the need for programs.

#### ■ RS485 serial communication

#### Compatible with both Modbus master and slave RTU.

This feature expands applications for the eco-conscious business field, and is ideal for the control of air conditioners, temperature, and electrical power.

#### • Up to 99 units can be connected.

When 17 or more FP series units need to be linked, you can link up to 99 units by using the Modbus function instead of MEWNET-W0. Since each FP0R unit can be either a master or a slave, a multi-master link can be created by passing a token from a user program.

#### ■ FP Web-Server2

#### The FP0R operation status can be monitored on a Web browser.

The FP0R operation status can be monitored on a Web browser by connecting FP Web-Server2 and FP0R via RS232C and making required settings using dedicated software (FP Web Configurator Tool 2).

FP Web-Server 2

#### ■ RS232C general-purpose serial communications

#### The control unit has an RS232C port for serial communications.

The RS232C port allows for direct connection to an operation display panel or a PC. Also, it facilitates bi-directional data communications with bar-code readers and other RS232C devices

- \* The port block has S, R, and G terminals for connection.
- Operation display panels can also be connected to the tool port.
- Both the relay output and transistor output types of control unit equipped with an RS232C port are available

#### ■ CC-Link slave unit

This unit is compatible with CC-Link, which is an open network, and capable of reading/writing four-word data through a maximum of 16 input and 16 output points.

#### ■ I/O link unit

This link unit enables FP0R to serve as a slave station of MEWNET-F (remote I/O system) and exchange I/O data from 32 input points and 32 output points with a master station without the need for programs.

FP0-IOL (AFP0732)

### OTHER USEFUL FUNCTIONS

#### ■ Program protection

#### Program upload protection setting

User programs can be protected from unauthorized copying by disabling program upload using our software, FPWIN. This function is useful for users who manage original programs on a

#### Eight-character password

Since uppercase and lowercase alphanumeric characters can be used, there are approx. 218 trillion possible password combinations. If an incorrect password is entered three times in a row, a cold reboot is required.

This function is useful for users who upload programs from FP0R

#### ■ Temperature controller

- A temperature control program can be written in only one line by using a PID instruction (F356 EZPID), facilitating temperature control programming by a PLC, which had previously been considered difficult.
- The total accuracy is ±0.8°C ±33.44°F (K, J and T range). Two types are available: 4-channel and 8-channel types. Up to three units can be connected, allowing high-accuracy multi-point PID control of a maximum of 24 channels.

#### Thermocouple unit

(4ch) AFP0420 8ch AFP0421 (FP0-TC8) (FP0-TC4)

#### Built-in real-time clock (T type only)

The clock allows for year, month, day, hour, minute, and second data processing. The clock data can be linked to periodic monitoring of production data and operation status, and the management of error history records.

#### ■ Interrupt input

This function takes in input signals at high speed regardless of the scan time and instantly executes the interrupt program. This is useful for high-accuracy positioning control or control of defective item ejector valves. The X0 to X7 inputs can be designated as interrupt inputs (C10: X0 to X5).

#### Pulse catch

This function can take in 10 µs short pulse inputs and is therefore ideal for taking in signals from a sensor to detect small components.

catch inputs.

#### ■ Analog I/O

The lineup includes a compact analog I/O unit with one analog output and two analog input channels, an A/D converter unit with eight analog input channels, and a D/A converter unit with four analog output channels. Communication using up to 24 channels is possible. Both the compact body size and the high input/output resolution of 1/4,000 (12 bits) have been achieved. The DIP switches in the unit cover a variety of input/output ranges and are user-friendly.

Analog I/O unit Input: 2ch / Output: 1ch

AFP0480

Input: 8ch AFP0401 (FP0-A80)

Voltage output: 4ch

A/D converter unit D/A converter unit D/A converter unit Current output: 4ch

AFP04121

#### **■ EEPROM data saving (F12 and P13 instructions)**

All FP0R series models are equipped with EEPROM, which can electrically rewrite data and retain data without the need for voltage supply. Setting data and production result data can be written and saved by the P13 instruction, and read out by the F12 instruction when necessary.

Note: Each block is limited to 10,000 write operations

#### ■ Program download in RUN mode (Comment writable)

Even while the equipment is operating with FP0R in RUN mode, a whole program edited offline can be downloaded to FP0R, and comments can be written simultaneously.

Programs can be changed without stopping a running production

### **PROGRAMMING SOFTWAR**

#### ■ Control FPWIN Pro (IEC61131-3 compliant Windows version software)

Compliant with international standard IEC61131-3 Programming software approved by PLC Open

### • Programming in the language most suited to the

Easy-to-understand, efficient programs can be created, for example, by using a ladder program for machine control or ST for communications control

#### Programming in the language you are good at

Programming time can be greatly reduced by the easy ability to split and then integrate programming for each function and process.

#### **Features**

#### 1. Five programming languages can be used.

Programming can be done using the language most familiar to the developer or using the language most suited to the process to be performed. High-level (structured text) languages that allow structuring, such as C. are supported.

#### 2. Easy to reuse well-proven programs

Efficiency when writing programs has been greatly increased by being able to split programming up for each function and process using structured programming.

#### 3. Keep know-how from getting out

By "black boxing" a part of a program, you can prevent know-how from leaking out and improve the program's maintainability.

- 4. Uploading of source programs from PLC possible. Maintainability increased by being able to load programs and comments from the PLC
- 5. Programming for all models in the FP series possible.

#### Operational Environment \* FPOR is compatible with Ver. 6.1 or later.

| OS                 | Windows 2000/XP/Vista/7 (Note)                |
|--------------------|---|
| Hard disk capacity | At least 120 MB                               |
| CPU                | Pentium III processor (700 MHz) or compatible |
| Onboard memory     | At least 256 MB RAM or more                   |
| Screen resolution  | At least 1,024 x 768                          |
| Display colors     | High Color (16-bit) or higher                 |
| Applicable PLC     | FP0R/FP0/FPΣ/FP-X/FP-e/FP2/FP2SH              |

Note: Only Ver. 6.2 or later is compatible with Windows 7. (To be released in September 2011)

#### ■ Control FPWIN GR (Windows version software)

The ladder programming software for FP series Highly operational software tool for maximizing convenience in the field

#### **Features**

- 1. Easy field operations not requiring the use of a mouse for data entry, search, writing, monitoring and timer changes, all carried out only from the keyboard.
- 2. All FP series PLCs are supported.
- 3. Easy programming with wizard functions.
- 4. Communication with GTWIN and PCWAY simultaneously through the same port.
- 5. A simulation function is available.

#### Operational Environment \* FPOR is compatible with Ver. 2.8 or later. os Windows 98/Me/2000/XP/Vista/7 (Note) Hard disk capacity At least 40 MB CPU Pentium 100 MHz or higher At least 64 MB (depends on OS) Onboard memory Screen resolution At least 1,024 x 768 Display colors High Color (16-bit) or higher Applicable PLC FP0R/FP0/FPΣ/FP-X/FP-e/FP2/FP2SH

Note: Only Ver. 2.90 or later is compatible with Windows 7.

### PART NUMBER LIST

#### Control units

#### Intelligent units Units in common with FP0

### INSTALLATION AND OPTIONS

#### Installation

#### The control unit width is only 25 mm 0.98 in\*. Even when expanded to allow for 128 I/O points, the total width is only 105 mm 4.13 in.

The control unit is pocket-sized: W 25 x H 90 x D 60 mm W 0.98 x H 3.54 x D 2.36 ii

The number of I/O points can be expanded up to 128. Even with the maximum expansion, the size is only W 105 x H 90 x D 60 mm W 4.13 x H 3.54 x D 2.36 in. The ultra-compact body size and installation area facilitate the miniaturization of target machines, equipment, and control panels.

\* The 32 I/O points type control unit is 30 mm 1.18 in in width

#### Three options for installation methods

The control unit can be directly mounted on a panel by using the optional flat type mounting plate.

Flat type mounting plate\* \* Cannot be used when expanded

#### Up to three expansion units can be directly connected without connection cables.

The expansion units can be directly connected to the control unit with a simple operation using the expansion connector and lock lever on the side of the unit. Dedicated cables or backplanes are not necessary for expansion.

#### A terminal block type and a connector type are available. Both can be detached for easy wiring.

#### Options

#### Wiring tools

#### Terminal screwdriver

Necessary when wiring relay output type and

terminals block (Phoenix) Part number: AFP0806

Molex connector pressure contact tool Necessary when wiring relay output type and molex connectors

Part number: AFP0805

Multi-wire connector pressure contact tool Necessary when wiring transistor output type

Part number: AXY52000FP

#### Parts for mounting

FP0 Slim type mounting plate Screw-stop attachment plate, Slim model

Part number: **AFP0803** (including 10 pieces)

Flat type mounting plate

Screw-stop attachment plate, Flat model

Part number: **AFP0804** (including 10 pieces)

#### I/O cables

Relay output molex type I/O cable Loose-wiring cable (9 leads) with molex socket attached at one end. AWG20, 0.5 mm2, 1 set; 2 cables (blue & white)

< Length: 1 m 3.28 ft > 2 cable set
< Length: 3 m 9.84 ft > 2 cable set Part number: **AFP0553** 

Transistor output type I/O cable Loose-wiring cable (10 leads) with connectors attached at one end, AWG22, 0.3 mm2, 1 set: 2 cables (blue & white)

< Length: 1 m 3.28 ft > 2 cable set < Length: 3 m 9.84 ft > 2 cable set

Part number: **AFP0521** Part number: **AFP0523** 

• Flat cable connector set (10 leads)

Part number: AFP0808 (including 4 pieces)

Notes: 1) One I/O cable set (2 cables) is necessary with the following models: C10RS / C10RM, C14RS / C14RM, E8RS / E8RM, E16RS / E16RM

2) One I/O cable set (2 cables) is necessary with the following models: C16T / E16X, E16T / E16YT 3) Two I/O cable sets (total 4 cables) are necessary with the following models: C32T / E32T

#### Maintenance parts

Part number: AFP0551

Terminal socket Attaches to relay output and terminal block types.

Molex socket Attaches to relay output and molex connector types.

Part number: AFP0801 (2 sokets per pack)

Part number: **AFP0807** (2 sokets per pack)

FP0R Power cable (Length: 1 m 3.28 ft) Attaches to FP0R control unit.

Part number: AFPG805 (1 cable per pack)

### **OPTIONS**

#### **■ OPTIONS**

#### • RT-3 unit relays (Power PhotoMOS relay type)

### COMPATIBILITY

#### ■ Compatibility between FP0 and FP0R

#### Programs

FP0R has an "FP0-compatible mode". This mode provides conditions for functions, memory areas, system registers, etc. identical to those of FP0. If programs in FP0 are transported to FP0R, FP0R can function identically as FP0 did (with some exceptions described below).

#### Installation

The shape, outside dimensions, installation method, and the connector pin arrangement are identical to those of FP0.

This high degree of compatibility ensures easy and worry-free replacement of FP0 with FP0R even if the device or machine to be manufactured is identical.

• It is recommended that Control FPWIN Pro or FPWIN GR should be used for transporting FP0 programs to FP0R. Before an FP0 program is downloaded to FP0R, a message stating "Switch to FP0-compatible mode for the download?" appears. If "Yes" is chosen, FP0R will automatically be set in FP0-compatible mode.

• FP0 specification items not covered by FP0-compatible mode (See "FP0R User's Manual" for details.)

| Item  | FP0  | FP0R (FP0-compatible mode)   |  |  |
|---|--|--|--|--|
| Instruction P13: EEPROM write time            | 5 ms / block (256 blocks max.: 1,280 ms)             | 100 ms in units of 32 blocks (256 blocks max.: 800 ms) * Writing even only one block takes 100 ms. |  |  |
| Instruction F170: PWM output frequency range  | 0.15 Hz to 1 kHz                                     | 6 Hz to 1 kHz  |  |  |
| High-speed counter/pulse output elapsed value | ± 24 bits  | ± 32 bits  |  |  |
| Instruction F168: Home return                 | The elapsed value is not counted during home return. | The elapsed value is counted during home return.   |  |  |
| Instruction F169: Pulse output                | "Non-counting mode" selectable                       | Counted and added even when "non-counting mode" is selected  |  |  |
| Instruction F144: Serial data communications  | Transmittable data size: Unlimited                   | Transmittable data size: 2,048   |  |  |

Note: The F type has no compatible functions because it does not correspond to any units of the conventional FP0 series.

| Shock resistance                                  |               | 147 m/s² or more , 4 times each in X, Y, and Z directions  |  |
| Noise immunity                                    |               | 1,000 V (p-p) with pulse widths 50 ns and 1 µs (using a noise simulator) (Power supply terminal)   |  |
| Operating condition                               |               | Free from corrosive gasses and excessive dust  |  |

#### ■ Input specifications (Common to control units and expansion units) (As for the limitation on the number of simultaneous ON points, please refer to the manual.)

| Item                |                      | Specifications  |                             |  |  |
|---------------------|----------------------|---|-----------------------------|--|--|
| <u>'</u>            | item                 | Control unit  | Expansion unit              |  |  |
| Rated input v       | voltage              | 24 V DC   |                             |  |  |
| Operating vo        | Itage range          | 21.6 to 2   | 6.4 V DC                    |  |  |
| Rated input current |                      | 2.6 mA approx. (at 24 V DC)   | 4.7 mA approx. (at 24 V DC) |  |  |
| Input impeda        | ince                 | 9.1 kΩ approx.  | 5.1 kΩ approx.              |  |  |
| Input points p      | per common           | 6 points / common (C10), 8 points / common (C14, C16), 16 points / common (C32, T32, F32) |                             |  |  |
| Min. ON volta       | age/ON current       | 19.2 V / 2 mA   |                             |  |  |
| Max. OFF vol        | tage/OFF current     | 2.4 V / 1.2 mA  |                             |  |  |
| Response            | $OFF \rightarrow ON$ | 20 µs or less * An input time constant (0.1 to 64 ms) can be set.                         | 2 ms or less                |  |  |
| time                | $ON \rightarrow OFF$ | Same as above   | Same as above               |  |  |
| Insulation method   |                      | Photocoupler  |                             |  |  |

Since the response time of X0 to X7 is very fast (for high-speed counter input) the FP0 happens to chattering noise as an input signal. To prevent this, it is recommended that the timer should be put in the ladder program.

### **SPECIFICATIONS**

|                        | Range for R 0 to 1500.0 °C/32.0 to 1590.0 °F (Note 1)  |
| Digital output         | K and J (when using °C): K -1000 to K5000 K and J (when using °F): K -1480 to K7900 (Note: 1) (When range over using °C: K-1001, K5001 or K8000) (When range over using °C: K-1481, K7901 or K8000) (When the thermocouple broken: K8000) (Note: 2) (Until the temperature can be measured at the initial startup: K8001) (Note: 3)  T (when using °C): K -1000 to K4000 T (when using °C: K -1480 to K7520 (When range over using °C: K -1001, K4001 or K8000) (When range over using °C: K -1001, K4001 or K8000) (When the thermocouple broken: K8000) (Note: 2) (Until the temperature can be measured at the initial startup: K8001) (Note: 3)  R (when using °C): K0 to K15000 (When the using °C: K320 to K15900 (Note: 1) (When range over using °C: K 0, K15001 or K16000) (When range over using °C: K 0, K15001 or K16000) (When the thermocouple broken: K16000) (Note: 1) (When thermocouple broken: K16000) (Note: 2) (Until the temperature can be measured at the initial startup: K16001) (Note: 3) |

| Item                         | Specifications  |  |  |  |
|------------------------------|---|--|--|--|
| Resolution                   | 0.1 °C  |  |  |  |
| Sampling cycle (Note 5)      | 300 ms: when using 2 channels for an input points $^{(Note 4)}$ 700 ms: when using 6 channels for an input points $^{(Note 4)}$ 900 ms: when using 8 channels for an input points $^{(Note 4)}$ 900 ms: when using 8 channels for an input points $^{(Note 4)}$ |  |  |  |
| Overall accuracy             | Range for R and J (-100 to 500 °C): ±0.8 °C or less (-100 to 500 °C): ±0.8 °C or less (-100 to 99.9 °C): ±3 °C or less (-100 to 299.9 °C): ±3 °C or less (-100 to 299.9 °C): ±2 °C or less (-100 to 1,500 °C): ±2 °C or less                                    |  |  |  |
| Input impedance              | 1 MΩ or more  |  |  |  |
| Insulation method            | Between thermocouple input terminals and FP0 internal circuits:     Photo-coupler insulation, DC/DC converter insulation     Between thermocouple input terminal channels: PhotoMOS relay insulation  |  |  |  |
| Number of I/O contact points | 32 input contact points (Note 6)  |  |  |  |

- Number of I/O contact points | 32 input contact points |
  Notes:

  1) The measurement range available for degree Celsius is not available for degree Fahrenheit, of which the upper-limit measurement is set lower than degree Celsius, since the digital value (temperature value displayed) for degree Fahrenheit is bigger than that for degree Celsius, since the digital value (temperature value displayed) for degree Fahrenheit is bigger than that for degree Celsius.

  2) When the thermocouple is broken, the digital value will be come K8000 or K16000 within 70 seconds since broken. Practice in the ladder program a process for avoiding a risk, would be resulting from a broken thermocouple, and exchange the thermocouple and the conversion data will be ready after the initial startup was made, the digital value shows K8001 or K16001. Those are not a temperature data.

  4) Until the conversion data will be ready after the initial startup was made, the digital value shows K8001 or K16001. Those are not a temperature data.

  4) Conversion values for 6-time measurements (6 from the latest 8 measurements, excluding the max and min.) are averaged, so that it takes time for the digital value to be displayed due to the rapid temperature change.

  6) The control unit reads the data for 2 channels per 1 scan by the control unit. Read data by utilizing the sample program given in the product specifications and manual.

| Transmission distance (Total distance)           | Max. 700 m 2,297 ft (using twisted-pair cable) Max. 400 m 1,312 ft (using VCTF cable) |
| Transmission speed (Baud rate)                   | 0.5 Mbits/s   |
| Number of control I/O point per an I/O link unit | 64 points (Input: 32 points and Output: 32 points) (Note)                             |
| Remote I/O map allocation                        | 32X / 32Y   |
| Interface  | Conforming to RS485   |
| Transmission error check                         | CRC (Cyclic Redumdancy Check) method  |

Note: This point number is the number of points that can be linked for inputting and outputting via the host PLC and network MEV/NETF. If the output for the I/O link unit error flag is set to ON, this number becomes 63 points (31 input points and 32 output points).

#### **■** FP Web-server2 unit specifications (FP0 Expansion units)

| Item                    | Specifications  |
|-------------------------|---|
| Communication functions | RS232C ⇔ Ethernet conversion (PLC remote programming via Ethernet) E-mail sending function HTTP server function General-purpose communication (Server/Client) PPP server function |
| Communication interface | RS232C terminal block 3-pin: Mainly used for PLC connection<br>RS232C D-Sub 9-pin: Mainly used for Modem connection<br>100 BASE-TX (RJ45): Used for Ethernet connection           |
| RS232C communication    | Transmission speed: 1,200, 2,400, 4,800, 9,600, 19,200, 38,400, 57,600, 115,200 bits/s Data length: 7 bits / 8 bits, Parity: Even / Odd / None                                    |
| Ethernet communication  | 100 Mbits/s (100 BASE-TX: RJ45)   |
| Supported protocol      | TCP, UDP, IP, DHCP, FTP, TELNET, HTTP, SMTP, and PPP  |
| Memory size             | 148 kB approx. (for storing htm files)  |
| Setup method            | Setup using FP Web Configurator Tool 2  |

#### ■ CC-Link slave unit specifications (FP0 Expansion units)

#### 1. Communication specifications

| 1                           | tem         | Specifications                                       |                          |  |

|                             | 625 kbits/s | 900 m 2,952 ft                                       | 600 m 1,969 ft           |  |
|                             | 156 kbits/s | 1,200 m 3,937 ft                                     | 1,200 m 3,937 ft         |  |
| Interface                   |             | RS485  |                          |  |
| Station type                |             | Remote device station                                |                          |  |
| Number of occupied stations |             | 1 station  |                          |  |

Note: Length of the multi-drop connected cables at both ends

The cable length has restrictions in communication speed, CC-Link version, and dedicated cables to be used.

For details concerning the CC-Link, refer to the CC-Link Partner Association.

When an FP0 thermocouple unit is used with an FP0 CC-Link slave unit, the measurement accuracy of the thermocouple unit which is installed on the left of the CC-Link slave unit is as shown in the table below.

| Thermocouple |                                  | Standard specifications | When CC-Link slave unit with a thermocouple unit |
|--------------|----------------------------------|-------------------------|--|

Start up may not be possible if a device with a large inrush current is connected even if below the rated current. In such a case, we recommend suppressing the inrush current by inserting a 1 to 2  $\Omega$  resister between the power supply unit and the device.

#### Applicable crimp teriminals

Notes: 1) See page 13 for the "Control unit replacement table" of the existing FP0 control units.

2) A power cable (Part number: AFPG805) is supplied with the control units.

Notes: 1) The relay output type expansion units come with a power cable (part number: AFP0581).

(The transistor output type expansion units need no power cable.)

2) The terminal block type relay output units have two terminal blocks (9 pins) made by Phoenix.

Use a 2.5 mm 0.10 inch wide screwdriver. Preferably use the specific terminal block screwdriver (part number: AFP0806, Phoenix type code SZS0, 4 x 2.5 mm 0.10 inch) or equivalent.

<sup>3)</sup> The connector type relay output units have two connectors made by Nihon Molex (Molex type code 51067-0900, 9 pins). Use the specific Molex connector press-fit tool (part number: AFP0805, Nihon Molex type code 57189-5000) or equivalent.

<sup>4)</sup> The transistor output units have a press-fit socket for wire-pressed terminal cable and contacts. Use the press-fit tool (part number: AXY52000FP) for wire-pressed terminal cable.

#### 4 Link and communication units

| Product name           | Specications  | Power supply voltage | Product number | Part number |
|------------------------|---|----------------------|----------------|-------------|
| FP0 CC-Link Slave Unit | This unit is for making the FP0 function as a slave station of the CC-Link.  Only one unit can be connected to the furthest right edge of the FP0 expansion bus.  Note: Accuracy will change if an FP0 thermocouple unit is used at the same time.  For details, please refer to the catalog or to the CC-Link Unit manual. | 24 V DC              | FP0-CCLS       | AFP07943    |
| FP0 I/O Link Unit      | This is a link unit designed to make the FP0 function as a station to MEWNET-F (remote I/O system).   | 24 V DC              | FP0-IOL        | AFP0732     |
| KS1 Signal Converter   | RS232C/RS485 data can be easily monitored by LAN.   | 24 V DC              | _              | AKS1202     |
| C-NET Adapter          | This is an RS485 adapter designed to allow use of the computer link function for  |                      | _              | AFP8536     |
| (for computer side)    | connecting to a network-connected PLC via C-NET from a host computer.   | 24 V DC              | _              | AFP8532     |
| FP Web-Server 2 Unit   | Unit for connecting FP series or RS232C interface device and Ethernet Web-server function and E-mail sending function   | 24 V DC              | FP-WEB2        | AFP0611     |

#### **5** Power supply unit and others

| Product name          | Specications   | Product number | Part number |
|-----------------------|--|----------------|-------------|
| FP0 Power Supply Unit | Input voltage: 100 to 240 V AC Output capacity: 24 V DC, 0.7 A | FP0-PSA4       | AFP0634     |
| ED Managed and an     | Data clear type  | _              | AFP8670     |
| FP Memory Loader      | Data hold type   | _              | AFP8671     |

#### **6** Programming tools

| Product name   | Specications Part n  |   |           |  |  |  |
|--|--|---|-----------|--|--|--|

| Multi-wire connector pressure contact tool | Necessary when wiring transistor output type connectors.   | AXY52000FP                  |                              |  |  |  |
| FP0 Slim type Mounting plate               | Mounting plate Screw-stop attachment plate for FP0 expansion unit. Slim model.                   |                             |                              |  |  |  |
| FP0 Flat type Mounting plate               | Screw-stop attachment plate for FP0 control unit. Flat model.                                    | AFP0804 (set for 10)        |                              |  |  |  |
| Relay output Molex type I/O cable          | Loose-wiring cable (9 leads) with molex socket attached at one end, AWG20, 0.5 mm <sup>2</sup> , | Length: 1 m 3.3 ft          | AFP0551 (2 cables set)       |  |  |  |
| Relay output Molex type I/O cable          | 1 set: 2 cables (blue & white).  | Length: 3 m 9.8 ft          | AFP0553 (2 cables set)       |  |  |  |
| Transistor output type I/O Cable           | Loose-wiring cable (10 leads) with connectors attached at one end, AWG22, 0.3 mm <sup>2</sup> ,  | Length: 1 m 3.3 ft          | AFP0521 (2 cables set)       |  |  |  |
| Transistor output type i/O Cable           | 1 set: 2 cables (blue & white)   | Length: 3 m 9.8 ft          | AFP0523 (2 cables set)       |  |  |  |
| Flat cable connector set                   | Flat cable connector set (10 leads)  |                             | AFP0808 (including 4 pieces) |  |  |  |
| Terminal socket                            | Attaches to relay output and terminal block type. Maintenance part                               |                             | AFP0802 (2 sokets per pack)  |  |  |  |
| Molex socket                               | Attaches to relay output and Molex connector types. Maintenance part                             | AFP0801 (2 sokets per pack) |                              |  |  |  |
| Wire-press socket                          | Attaches to transistor output type. Maintenance part   | AFP0807 (2 sokets per pack) |                              |  |  |  |
| Power cable for conrol unit                | Attaches to FP0R control unit. Maintenance part Length: 1 m 3.3 ft                               | AFPG805 (1 cable per pack)  |                              |  |  |  |
| Power cable for expansion unit             | Attaches to expansion unit. Maintenance part Length: 1 m 3.3 ft                                  |                             | AFP0581 (1 cable per pack)   |  |  |  |

Note: FP0R is compatible with Ver. 2 or later.

### **IMENSIONS**

#### ■ Control units and Expansion units \*For the relay output type, the terminal block type is listed as the representative type

C10RS, C10RM, C10CRS, C10CRM, C10MRS, C14RS, C14RM, C14CRS, C14CRM and C14MRS

**Expansion units** 

E8RS, E8RM, E8YRS, E16RS and E16RM

DIN rail is attached on the center of the unit.
 The AFP0RE8YRS is not equipped with an input terminal block

#### Control units

C16T, C16P, C16CT, C16CP, C16MT and C16MP

#### **Expansion units**

E16T, E16P, E8X, E8YT and E8YP

DIN rail is attached on the center of the unit.
 The AFPORE8X has no output connector.
 The AFPORE8YT and AFPORE8YP has no input connector.

Input (8 points / common) X0 X1 X2 X3

Terminal array

RS232C port Terminal array

Output (8 points / common) 999 Y2 Y3

Note: Two COM terminals on the input circuit are connected

#### **Control units**

C32T, C32CT, C32P, C32CP, C32MT, C32MP, T32CT, T32CP, T32MT, T32MP, F32CT, F32CP, F32MT and F32MP

#### **Expansion units**

E32T, E32P, E16X, E16YT and E16YP

Notes: 1) DIN rail is attached on the center of the unit.
2) The AFP0RE32T, AFP0RE32P, AFP0RE16XT and AFP0RE16YP are

25 mm 0.98 in each.
3) The AFPORE16X has no output connector.
4) The AFPORE16YT and AFPORE16YP has no input connector.

### Input (16 points / common) X0 X1 X8 X9 X2 X3 XA XB X4 X5 XC XD X6 X7 XE XF COM COM COM

| Output (16 points / common) |     |         |    |     |  |  |  |  |  |
|-----------------------------|-----|---------|----|-----|--|--|--|--|--|
|                             | Y 0 | Y1      | Y8 | Y9  |  |  |  |  |  |
| Ī                           | Y 2 | Y3      | YA | ΥB  |  |  |  |  |  |
|                             | Y 4 | Y5      | YC | ΥD  |  |  |  |  |  |
| ĺ                           | Y 6 | Y7      | ΥE | YF  |  |  |  |  |  |
| [                           | (+) | (+) (-) |    | (-) |  |  |  |  |  |
|                             |     |         |    |     |  |  |  |  |  |

Notes: 1) Four COM terminals on the input circuit are connected inside the unit.
2) Two (+) terminals and two (-) terminals on the output circuit are connected respectively inside the unit.
