At the industry's leading edge

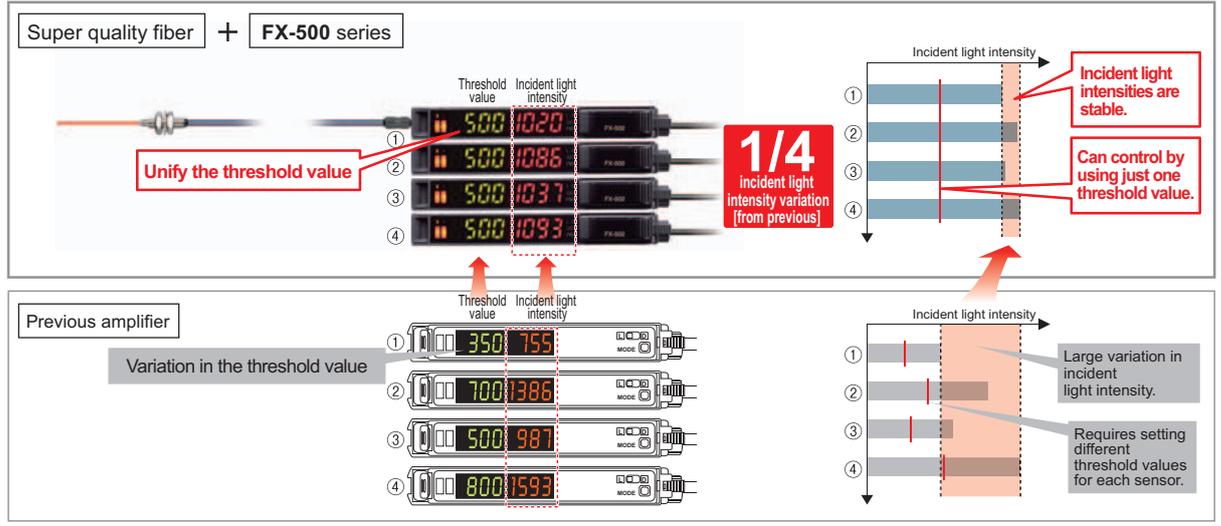

Improved the operability and visibility of the operation keys

Operation keys (setting switch and MODE key) have been renewed to be easy to operate. Also, the color of the keys has been changed from black to light gray to achieve good visibility in dim light.

High stability!

When the FX-500 series is used together with our super quality fiber, the incident light intensity variation among units is decreased to only 1/4 of that of conventional models. By being close to absolute values instead of modified digital values, changes in detection that could not be found in the past can now be monitored.

A quality that surpassed that of standard fibers!

New fibers developed using a new manufacturing method adopted by our own factory along with a persistent quality control system.
The basic performance of a standard fiber is greatly enhanced!

Stable emission amount $\downarrow \pm 10$

Variation in emission amount of the fiber core is controlled down to less than $\pm 10\%$, achieving a stable detection.

- Beam axis deviation: Thru-beam type within $\pm 2^\circ$, Reflective type within $\pm 3^\circ$
- Beam axis centering precision: within $\pm 150 \mu\text{m}$

$\phi 2.2 \text{ mm } \phi 0.087 \text{ in}$ standard fiber

New material
Single core standard fiber with high flexibility

Previous
In general, high-flexibility types adopt a multi-fiber core, which may result in large variation in light emission.

Expanded temperature range

Ambient temperature [-40 to +70 °C -40 to +158 °F in previous model]

-55 to +80 °C
-67 to +176 °F

1.2 times more than previous model

More flexible! **R4**

Bending radius [Previous model is R25 mm R0.984 in]

R4 mm
R0.157 in

1/6 of that of previous model

Integrated high-precision plug

The centering precision of the fiber core attached to the inserting plug is doubled. As the insertion precision is increased, the variation among units can be greatly suppressed.

- Centering precision: within $\pm 40 \mu\text{m}$

More bendable!

Bending durability [Previous model is 1,000 times]

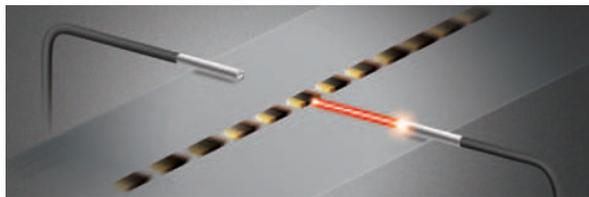

10 million times

10,000 times more than previous model

* Bending conditions
Bending radius: R10 mm R 0.394 in,
Reciprocating bending 180°

Max. 25 μs response time

FX-500 with its high response time contributes to improve productivity.

Performing minute object detection when using a small diameter fiber is now possible with a high response time and longer sensing range.

Hyper HYPR mode incorporated

FX-500 in combination with small diameter fibers which can handle challenging detections, allows long sensing range.

Tough FX-500 HYPR mode FD-41

Previous FX-301 (LONG mode) FD-NFM2

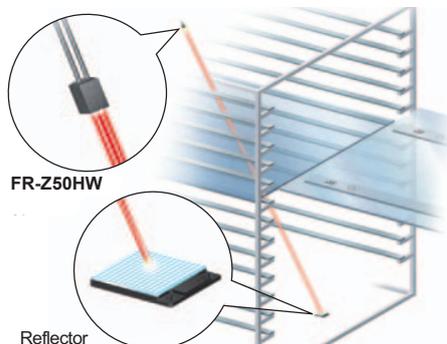

Max. 5.7 times! (Note) longer than the previous model

Note: When using FD-NFM2.

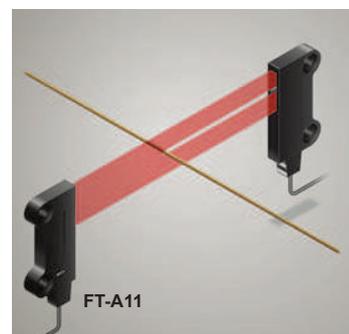

So accurate! Sharp detection with suppressed hysteresis

FX-500 with its accurate detection catches fractional differences in light intensity, achieving high precision and solving low-hysteresis applications.

- Long range detection of small objects with small difference in light intensity **H-02 mode**

- Highly accurate detection while avoiding saturation **H-01 mode**

Flat display with wide viewing angle

The large and high-contrast 7-segment display of high luminance provides clear visibility from a wide angle of view.

Resolves variation in displayed incident light intensity Display adjustment setting

The variation in display can be adjusted to random values. This helps to define proper instruction in a work order.

Stable detection over long and short periods Stabilized emission amount

The “four-chemical emitting element”, which we are the first to incorporate to maintain a stable level of light emission, has now become an industry standard. **FX-500** series continues to adopt the same emitting element as well as the “APC (Auto Power Control) circuit” which improves stability in short periods such as when the power is turned on.

Saves maintenance time Threshold tracking function

This function performs automatic setting to threshold value by checking the incident light intensity at desired intervals in order to follow the changes in the light amount resulting from changes in the environment over long periods (such as dust). This contributes to reduction in maintenance hours.

Suitable for preventative maintenance Self-diagnosis output

FX-502(P)
FX-505(P)-C2

FX-502(P) / 505(P)-C2 can set Output 2 as a self-diagnosis output. When the teaching of Output 1's threshold value is carried out, Output 2 is set concurrently with the setting randomly shifted by the amount of surplus of threshold value. Light intensity deterioration due to fiber breakage or dust accumulation can be notified as an alarm output.

- Detect deterioration in light intensity (e.g. Useful in dusty environment)

Self-diagnosis can be used with the threshold tracking function for added effectiveness.

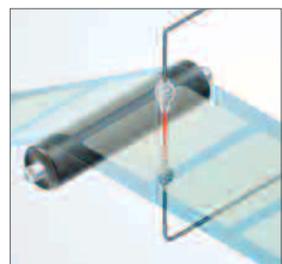

Stable detection while being eco-friendly Emission power & gain setting

In cases when the incident light intensity is saturated, the light emitting amount can be adjusted to the optimal level by AUTO without changing the response time. This allows stable detection with an optimal S/N ratio and saves energy by controlling the emitting electric current.

Auto mode (AUTO) and 3-level manual mode (H / M / L [fine-adjustable]) are incorporated.

- Detecting a transparent sheet

Built-in logic functions No PLC necessary, saving material and programming costs

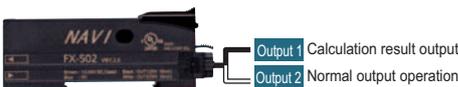

Logical calculation functions

3 logical calculations (AND, OR, XOR) are available with fiber sensor only. 3 logical operations can be selected against Output 1. Additional controller is not required so both wire-saving and cost reduction can be achieved.

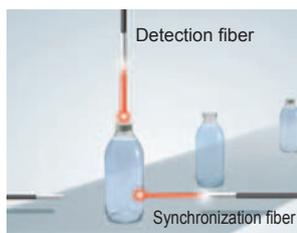

Calculation of two neighboring amplifiers

Calculation of two outputs in one amplifier **FX-502(P) / 505(P)-C2**

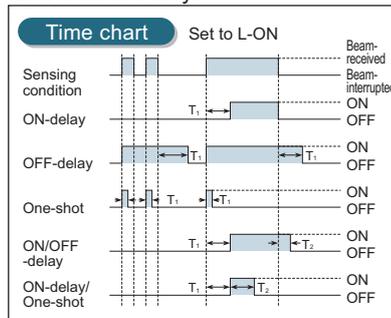

Calculation of one amplifier and external input **FX-502(P) / 505(P)-C2**

Equipped with 5 timer types

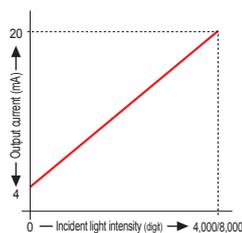

A wide variety of timer control operations can be carried out by fiber sensors only.

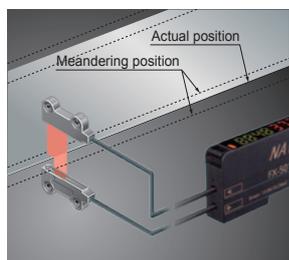

Timer period: 0.05 ms to 32 s
Output 1 has ON / OFF-delay and ON-delay / One-shot timers are available.

Analog output cable type **FX-505(P)-C2**

To monitor the sensing of objects, a 4 to 20 mA analog current is output in respond to the digital value of the incident light intensity.

Edge tracking of film or sheet

The meandering path can be monitored as the light intensity changes.

Smooth setup changes by 8 data banks

The number of data banks used for saving the setup conditions of the amplifier is increased to eight. Setup conditions can be saved and loaded to make setup changes easy at a worksite where multiple models are manufactured.

Remote control improves work efficiency by external input **FX-502(P) / FX-505(P)-C2**

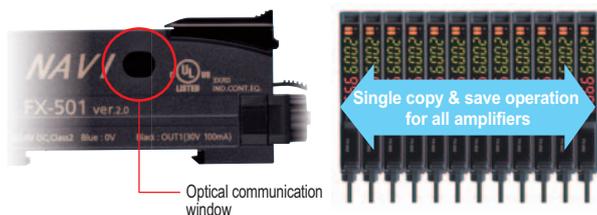

Work efficiency can be improved by operating via PLC output or other external signal. (**FX-502(P)** can operate via external signal when switching from Output 2 to external input.)

Functions operable by external input

Full-auto / Limit / 2-point teaching	Display adjustment setting
Data bank load / save	Logical calculation (self-unit only)
Emission halt	Copying function lock (self-unit only)

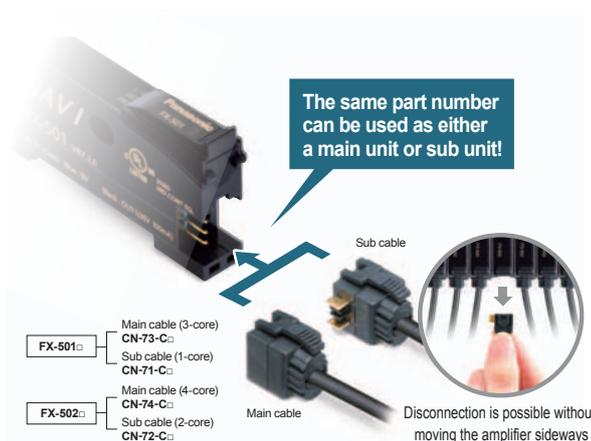

An optical communication function allows sensors to be adjusted simultaneously

The data that is currently set can be copied and saved all at once for all amplifiers connected together from the right side thanks to the optical communication function. This greatly reduces troublesome setup tasks and makes setup much smoother.

No need to specify a main unit or sub unit

All **FX-500** amplifiers can be used as either a main unit or a sub unit. Just use a main cable or a sub cable to distinguish the two. This reduces the costs of inventory management.

Notes: 1) Note that the sensing range of the free-cut type fiber may be reduced by 20 % max. depending upon how the fiber is cut.
 The sensing range of **FR-KZ22E** is specified for the attached reflector.
 The sensing range of **FR-KZ50E** and **FR-KZ50H** is specified for the attached reflector **RF-003**.
 The sensing range of **FR-Z50HW** is specified for the **RF-13**.
 2) The sensing range is the possible setting range for the attached reflector.
 The fiber can detect an object less than setting range for the reflector.
 However, note that if there are any white or highly-reflective surfaces near the fiber head, reflected incident light may affect the fiber head.
 If this occurs, adjust the threshold value of the amplifier unit before use.

Lens (For reflective type fiber)

Designation	Model No.	Description	
For reflective type fiber	Pinpoint spot lens FX-MR1		Pinpoint spot of $\varnothing 0.5$ mm $\varnothing 0.020$ in. Enables detection of minute objects or small marks. • Distance to focal point: 6 ± 1 mm 0.236 ± 0.039 in • Applicable fibers: FD-42G, FD-42GW • Ambient temperature: -40 to $+70$ °C -40 to $+158$ °F (Note)
	Zoom lens FX-MR2		The spot diameter is adjustable from $\varnothing 0.7$ to $\varnothing 2$ mm $\varnothing 0.028$ to $\varnothing 0.079$ in according to how much the fiber is screwed in. Sensing range for FX-500 series • Applicable fibers: FD-42G, FD-42GW • Ambient temperature: -40 to $+70$ °C -40 to $+158$ °F (Note) • Accessory: MS-EX3 (mounting bracket)
	Finest spot lens FX-MR3		Extremely fine spot of $\varnothing 0.15$ mm $\varnothing 0.006$ in approx. achieved. • Applicable fibers: FD-EG31, FD-EG30, FD-42G, FD-42GW, FD-32G, FD-32GX • Ambient temperature: -40 to $+70$ °C -40 to $+158$ °F (Note) Sensing range for FX-500 series
	Finest spot lens FX-MR6		Extremely fine spot of $\varnothing 0.1$ mm $\varnothing 0.004$ in approx. achieved. • Applicable fibers: FD-EG31, FD-EG30, FD-42G, FD-42GW, FD-32G, FD-32GX • Ambient temperature: -20 to $+60$ °C -4 to $+140$ °F (Note) Sensing range for FX-500 series
	Zoom lens (side-view type) FX-MR5		FX-MR2 is converted into a side-view type and can be mounted in a very small space. • Applicable fibers: FD-42G, FD-42GW • Ambient temperature: -40 to $+70$ °C -40 to $+158$ °F (Note) Sensing range for FX-500 series

Note: Refer to p.80 or p.85 for the ambient temperature of fibers to be used in combination.

Notes: 1) Be careful sure to use it only after you have adjusted it sufficiently when installing the thru-beam type fiber equipped with the expansion lens, as the beam envelope becomes narrow and alignment is difficult.
 2) The fiber cable length practically limits the sensing range.
 3) The fiber cable length for the FT-H30-M1V-S is 1 m 3.28 ft. The sensing ranges in HYPR, U-LG and LONG of FX-500 series are specified considering the length of the FT-J8 atmospheric side fiber.
 4) Refer to p.79, p.81, p.92, and p.94 for the ambient temperature of fibers to be used in combination.

Liquid inflow prevention joint (Note 2)	MS-FX-01Y	Applicable fibers	FD-HF40Y FD-F41Y	This joint suppresses false operations due to liquid slip-in from the top of the protective tube.	
Protective tube extension joint (Note 2)	MS-FX-02Y			The protective tube can be extended.	
Fiber mounting joint (Note 2)	MS-FX-03Y			The joint is used for mounting fibers on a tank.	
Single core holder	FX-AT15A	The incident light intensity may vary when using a multi-core fiber or a thin type sharp bending fiber. This holder suppresses the variation in the incident light intensity. (Brown)			
Reflector	RF-210	Used with FR-Z50HW.			
	RF-220	Refer to p.90 for the sensing range when FR-Z50HW is used in combination with a reflector.			
	RF-230				

Notes: 1) Do not bend the sleeve part of any side-view type fiber or ultra-small diameter head type fiber.
2) The joint internal ferrule (MS-FX-YF) is available as a spare part. A distorted ferrule may result in leakage.

PRECAUTIONS FOR PROPER USE

Refer to the "PRO mode operation manual" on our website for details.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Wiring

- Make sure that the power supply is OFF while adding or removing the amplifiers.
- Note that if a voltage exceeding the rated range is applied, or if an AC power supply is directly connected, the product may get burnt or damaged.
- Note that short-circuit of the load or wrong wiring may burn or damage the product.
- Do not run the wires together with high-voltage lines or power lines, or put them in the same raceway. This can cause malfunction due to induction.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- Make sure to use the quick-connection cable (optional) for the connection of the controller. Extension up to total 100 m **328.084 ft** is possible with 0.3 mm² or more, cable. However, in order to reduce noise, make the wiring as short as possible.
- Make sure that stress by forcible bending or pulling is not applied to the sensor cable joint and fiber cable.

Others

- Our products have been developed / produced for industrial use only.
- The specification may not be satisfied in a strong magnetic field.
- The ultra long distance (U-LG, HYPR) mode is more likely to be affected by extraneous noise since the sensitivity of that is higher than the other modes. Make sure to check the environment before use.
- Do not use during the initial transient time (H-SP, FAST, STD: 0.5 sec., LONG, U-LG, HYPR: 1 sec.) after the power supply is switched ON.
- These sensors are only for indoor use.
- Avoid dust, dirt, and steam.
- Make sure that the product does not come in contact with oil, grease, organic solvents such as thinner, etc., strong acid or alkaline.
- This product cannot be used in an environment containing inflammable or explosive gases.
- Never disassemble or modify this product.
- This product adopts EEPROM. Settings cannot be done a million times or more because of the EEPROM's lifetime.
