# Standard Type Cylindrical Inductive Proximity Sensors with Improved Basic Performance 

## Standard type cylindrical inductive proximity sensors with improved basic performance GX-300 series

## Improved basic performance

## Response frequency of $5 \mathbf{k H z}$ * allows the use of high-speed application

The GX-303S boasts a response frequency of 5 kHz and realizes high speed response.
The response frequency of other sensor models has been also improved by up to 4 times as compared to our conventional models.
Since the GX-300 series responds quickly to sensor ON/OFF judgement, it works well with a high-speed application and contributes to the reduction of equipment cycle time.

| Typical examples (Shielded type) |  | $\left(\begin{array}{c} \text { Significant } \\ \text { improvement } \\ \text { over } \\ \text { conventional } \\ \text { models! } \end{array}\right)$ |  |
| :---: | :---: | :---: | :---: |
| Type | Response frequency of our conventional mode |  | Response frequency of GX-300 standard sensing range type |
| $\varnothing 3 \mathrm{~mm}$ ø0.118 in | - |  | 5 kHz (GX-303S) |
| $\begin{gathered} \varnothing 4 \mathrm{~mm} \Phi 0.157 \mathrm{in} \\ \varnothing \text { Conventional model: } \\ \varnothing 3.8 / 84.4 \mathrm{~mm} \times 0.150 / \varnothing 0.173 \mathrm{in} \end{gathered}$ | 1 kHz | 4 times | 4 kHz (GX-304S) |
| $\varnothing 5.4 \mathrm{~mm}$ ø0.213 in | 1.5 kHz | 2.7 times | 4 kHz (GX-305S) |
| M5 threaded | 1 kHz | 4 times | 4 kHz (GX-305M) |
| M8 threaded | 1 kHz | 2 times | 2 kHz (GX-308M) |
| M12 threaded | 450 Hz | 3.3 times | 1,500 Hz (GX-312M) |
| M18 threaded | 300 Hz | 2 times | 600 Hz (GX-318M) |

## What is response frequency?

A rotating plate having the standard sensing object pasted at constant intervals is placed in front of the proximity sensor. The plate is rotated while observing the sensing output. The maximum number of times per second at which sensing can be done, for which the corresponding sensing output can be obtained, is the maximum response frequency.

In other words, the larger the numeric value of the response frequency is, the faster the response is.
Example) Conversion of response frequency to response speed $1 \mathrm{kHz} \rightarrow 1$-ms cycle $\quad 5 \mathrm{kHz} \rightarrow 0.2-\mathrm{ms}$ cycle

a: Side length of standard sensing object

## Enhanced a degree of the detection margin

## Sensing over long distance

The M8 / M12 / M18 / M30 threaded type sensors are available in standard sensing range type or long sensing range type ("K" at the end of model No.).
The long sensing range means reliable detection with plenty of performance margin to spare.

## Sensing range comparison

## Minimum risk of collision or sensing error even if the distance to the sensing object changes due to equipment vibration

If the distance to the sensing object changes due to equipment vibration or time-related degradation, the sensor may generate sensing errors including sensing failure in some cases.
If the sensor is set up very close to the sensing object for the purpose of preventing detecting failures, the sensor may contact the sensing object and cause damage.

The long sensing range models facilitate the sensor setup for reliable sensing since they detect the sensing object at a long distance.

The distance to the dog becomes longer due to equipment vibration and the sensor may fail to detect the sensing object.

Conventional model

## Reduced variation in maximum operation distance

With the GX-300 series, variation in maximum operation distance is kept within $\pm 10 \%$ * $\pm 15 \%$ in the case of the previous GX series.

Variation in the maximum operation distance of the $\varnothing 3 / \varnothing 4 / \varnothing 5.4 \mathrm{~mm} \varnothing 0.118 / \varnothing 0.157 / \varnothing 0.213 \mathrm{in}, \mathrm{M} 5 / \mathrm{M} 8$ threaded type models has been also reduced as compared to the conventional models.

## Improved usability

## Indicator visible 360 degrees

The indicator is conveniently visible from any direction, thus facilitating installation check and operation confirmation.

## Further reduction of the size of small-diameter type sensors for easier embedment

The small-diameter type sensors are 25.1 mm 0.988 in in depth while the conventional models measured 30 mm 1.181 in . (GX-303S measures 27.1 mm 1.067 in in depth.)
The reduced unit size enables the installation of the sensor in a smaller space.

$$
\begin{aligned}
& \text { Comparison of depth dimensions } \\
& \text { of small-diameter type sensors }
\end{aligned}
$$

| Type | Our conventional model | GX-300 |
| :---: | :---: | :---: |
| ø3.0 mm ø0.118 in | - | 27.1 mm 1.067 in |
| $ø 3.8$ mm ø0.150 in | 30 mm 1.181 in | - |
| $\varnothing 4.0$ mm ø0.157 in | - | 25.1 mm 0.988 in |
| $\varnothing 4.4 \mathrm{~mm}$ ø0.173 in | 30 mm 1.181 in | - |
| $\varnothing 5.4 \mathrm{~mm}$ ø0.213 in | 30 mm 1.181 in | 25.1 mm 0.988 in |
| M5 thread | 30 mm 1.181 in Threaded section: 18 mm 0.709 in | 25.1 mm 0.988 in Threaded section: 15.1 mm 0.594 in |

## Extensive model lineup

The GX-300 series includes 310 different sensor models.
We offer various types of sensor models such as the cable type (cable length: 2 m 6.562 ft or 5 m 16.404 ft ), connector type and pigtailed type. Furthermore, we can supply bending-resistant cable type models (cable length: 2 m 6.562 ft or 5 m 16.404 ft ), which are suitable for installation on moving parts.
(For the detail of our model lineup, see page 6 and following pages.)

## Suitable for loT applications

## IO-Link compatibility

Evolution from ON/OFF judgment sensors to sensors capable of transmitting the detection level and sensor status information

* Only the M8 / M12 / M18 / M30 threaded type, PNP output, normally open type models are compatible with IO-Link.

## What is "IO-Link"?

IO-Link
IO-Link is an open communication technology according to IEC 61131-9 for the 1:1 bidirectional communication between the IO-Link device (sensor or actuator) and the IO-Link master.

- IO-Link compatible sensors can also be used as ordinary sensors (PNP output type).

- When IO-Link compatible sensors are connected to the IO-Link master, they can transmit not only ON/OFF signal but also sensor level information and operation mode switching information in both ways. So, the sensors can be utilized for the visualization of manufacturing operations or for the incorporation of loT technology.
-Typical field network

| CC-Línk IE Field | CC-Link | To PLC |
| :--- | :--- | :--- |
| EtherCAT. | Devicelvet |  |
| EtheriNet/IP | ModCus <br> TCP |  |

*CC-Link IE Field and CC-Link are trademarks of Mitsubishi Electric Corporation, and are controlled by the CC-Link Partner Association. DeviceNet and EtherNet/IP are registered trademarks of ODVA (Open DeviceNet Vender Association, Inc.).
EtherCAT is a registered trademark of Beckhoff Automation GmbH. Modbus is a registered trademark of Schneider Automation, Inc.

## IO-Link usage example 1

> Using the process data, the sensor transmits the detection level ( 8 bits) to the host device over IO-Link.

Transmission of ON/OFF signal to host device such as PLC

|  |  |  |  | GX-305M-B-P | transistor | Normally closed |

Note: The maximum operation distance stands for the maximum distance for which the sensor can detect the standard sensing object.
The stable sensing range stands for the sensing range for which the sensor can stably detect the standard sensing object even if there is an ambient temperature drift and/or supply voltage fluctuation.

DC 3-wire type (Shielded type)

Notes: 1) The maximum operation distance stands for the maximum distance for which the sensor can detect the standard sensing object.
The stable sensing range stands for the sensing range for which the sensor can stably detect the standard sensing object even if there is an ambient temperature drift and/or supply voltage fluctuation.
2) The PNP output, normally open type models [GX-3■M(K)-A-P(-ם)] are compatible with IO-Link.

The PNP output, normally closed type models and all NPN output type models do not support IO-Link.

DC 3-wire type (Non-shielded type)

Notes: 1) The maximum operation distance stands for the maximum distance for which the sensor can detect the standard sensing object. The stable sensing range stands for the sensing range for which the sensor can stably detect the standard sensing object even if there is an ambient temperature drift and/or supply voltage fluctuation.
2) The PNP output, normally open type models $[$ GX-3 $\square \mathbf{M L}(\mathbf{K})-\mathrm{A}-\mathrm{P}(-\square)]$ are compatible with IO-Link.

The PNP output, normally closed type models and all NPN output type models do not support IO-Link.

## 5 m 16.404 ft cable length type

5 m 16.404 ft cable length type (standard: 2 m 6.562 ft ) is also available. When ordering this type, suffix "-C5" to the model No. (e.g.) 5 m 16.404 ft cable length type of GX-303S-A-N is "GX-303S-A-N-C5".

## Bending-resistant cable type ( $2 \mathrm{~m} 6.562 \mathrm{ft} / 5 \mathrm{~m} 16.404 \mathrm{ft}$ cable length)

The shielded, non-threaded type sensors ( $\varnothing 4 \mathrm{~mm} \varnothing 0.157 \mathrm{in} / \varnothing 5.4 \mathrm{~mm} \varnothing 0.213 \mathrm{in}$ ) and threaded type sensors (M5 / M8) are available with a bending-resistant cable (cable length: 2 m 6.562 ft or 5 m 16.404 ft ). (Note that the $\varnothing 5.4 \mathrm{~mm} \varnothing 0.213 \mathrm{in}$ size, normally closed type sensors are not available with a 5 -m-long bending-resistant cable.)
When ordering bending-resistant 2 m 6.562 ft cable type, suffix "-R" to the model No. When ordering bending-resistant 5 m 16.404 ft cable type, suffix "-R5" to the model No.
(e.g.) Bending-resistant 2 m 6.562 ft cable type of GX-304S-A-N is "GX-304S-A-N-R".
(e.g.) Bending-resistant 5 m 16.404 ft cable type of GX-304S-A-N is "GX-304S-A-N-R5".

## Pigtailed type

The threaded type sensors (M8 / M12 / M18 / M30) are available in the pigtailed type. (Connector: M12)
When ordering this type, suffix "-J" to the model No.
(e.g.) Pigtailed type of GX-308M-A-N is "GX-308M-A-N-J".

## Connector type

The threaded type sensors (M12 / M18 / M30) are available in the connector type. When ordering this type, suffix "-Z" to the model No (e.g.) Connector type of GX-312M-A-N is "GX-312M-A-N-Z".

## - List of connection systems

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of $+23^{\circ} \mathrm{C}+73^{\circ} \mathrm{F}$.
2) The sensors with " $\mathbf{N}$ " indicated instead of $\square$ in their model No. are NPN output type. The sensors with "P" are PNP output type.
3) The maximum operation distance stands for the maximum distance for which the sensor can detect the standard sensing object.

The stable sensing range stands for the sensing range for which the sensor can stably detect the standard sensing object even if there is an ambient temperature drift and/or supply voltage fluctuation.
4) PNP output, normally closed type models and all NPN output models do not support IO-Link.
5) When the cable length is 2 m 6.562 ft .
6) The response frequency is an average value.
7) The bending-resistant cable type comes with a $0.2 \mathrm{~mm}^{2} 3$-core bending-resistant $\varnothing 4 \mathrm{~mm} \varnothing 0.157$ in cabtyre cable.
8) The bending-resistant cable type comes with a $0.2 \mathrm{~mm}^{2} 3$-core bending-resistant $\varnothing 6 \mathrm{~mm} \varnothing 0.236$ in cabtyre cable.

Correlation between monitor output and sensing range

- This catalog is a guide to select a suitable product. Be sure to read instruction manual attached to the product prior to its use.

| - Never use this product as a sensing device |
| :--- |
| for personnel protection. |
| - In case of using sensing devices for |
| personnel protection, use products which |
| meet laws and standards, such as OSHA, |
| ANSI or IEC etc., for personnel protection |
| applicable in each region or country. |

## Mounting

- The tightening torque should be under the value given below.

## Installation using set screw

- Do not tighten the product mounting nuts with excessive force.

## <Non-threaded type>

## Installation using nut

- Do not tighten the nut with excessive force. Be sure to install the toothed locked washer.
- In the case of the M8 threaded type, the allowable strength differs depending on the distance from the tip of the head. The following table shows the allowable tightening strengths for section $B$ and section $C$ shown in the diagram. (Section B starts from the tip of the head and its dimension is indicated in the table. Section $C$ includes the nut on the head side. Therefore, if the nut extends into section $B$ even slightly, the strength of section $B$ is applicable.)
- The following allowable tightening strengths are applicable when the washer is installed.

## Installing small-diameter sensor

- Please use the sensor after confirming the installation distance by following (a) and (b) with an actual detection object when you install.
(a) The detection distance receives the influence by the material of the detection object, thickness, shape, and the size. So, the detection object is brought close to the front side of the sensor and detection distance (S) is measured. For the effect of the material, see the graph, "Correlation between sensing object size and sensing range," (p.16).
(b) Please decide installation distance (Sa) with $S \times 70 \%$ or less after measuring sensing distance(S).
- Please install the sensor to come within the range of (Sa) when the detection object moves from vertical direction.
- Please install the sensor to pass within the range of (Sa) when the detection object moves from horizontal direction.
- When using the sensor, refer to the "Standard sensing object" specified in the specifications (p.10) and the graph, "Correlation between sensing object size and sensing range," (p.16).

## Distance from surrounding metal

- As metal around the sensor may affect the sensing performance, pay attention to the following points.

## Influence of surrounding metal

- The surrounding metal will affect the sensing performance. Keep the minimum distance specified in the table below.
- When mounting the sensor using a nut, use the nut and washer provided with the product.
- The type of the provided nut varies in different models. See the external dimensions diagrams (p.23~) for the detail of the shape.

## Mounting method A (Using the provided nut)

## Mounting method B (Embedded in the metal)

(Unit: mm in)

## Mutual interference

- When two or more sensors are installed in parallel or face to face, keep the minimum separation distance specified below to avoid mutual interference

| Model No. <br> (Shielded type) | $\mathrm{L}(\mathrm{mm} \mathrm{in})$ | $\mathrm{M}(\mathrm{mm}$ in) |

|  |  |  |  |  |  |
|  |  |  |  |  |  |

Notes: 1) When sensors that are not compatible with IO-Link are used or when IO-Link compatible models are used as ordinary sensors, they operate in the standard I/O mode (SIO mode).
2) The operation mode can be changed by the IO-Link communications. The timer function of the output can be set up by the IO-Link communications.

## PRECAUTIONS FOR PROPER USE

## Others

- This product has been developed / produced for industrial use only.
- Do not install the product in the following locations. Doing so may result in product failure or malfunction.
- Outdoor locations directly subject to sunlight, rain, snow, water droplets, or oil.
- Locations subject to atmospheres with chemical vapors, in particular solvents and acids.
- Locations subject to corrosive gases.
- The product may malfunction if used near ultrasonic cleaning equipment, high-frequency equipment, transceivers, cellular phones, inverters, or other devices that generate a high-frequency electric field.
- Laying the product wiring in the same conduit or duct as high-voltage wires or power lines may result in incorrect operation and damage due to induction. Wire the product using a separate conduit or independent conduit.
- The following conditions shall be observed if you use the product under an environment using cutting oil that may affect product's life and/or performance.
- Usage in oil or water is prohibited.
- Impact on the product life may differ depending on the oil you use. Before using the cutting oil, make sure that it should not cause deterioration or degradation of sealing components.
- Never use thinner or other solvents. Otherwise, the product surface may be dissolved.
- When turning ON the power by influence of temperature environment, an output mis-pulse sometimes occurs. After the product has passed for 300 ms after turning ON, please use in the stable state. If the sensing object is located near the sensor's sensing surface, an output mis-pulse may be generated for 300 ms or longer at the time of power-on. Be sure to check the product for proper operation under actual operating condition before using.
- The product is adjusted with a high degree of accuracy, so do not use in the environment with sudden temperature change.
- Do not attempt to disassemble, repair, or modify the product.
- Do not use a voltage that exceeds the rated operating voltage range. Applying a voltage that is higher than the operating voltage range may result in damage or burnout.
- Be sure that the power supply polarity and other wiring is correct. Incorrect wiring may cause explosion or burnout.
- If the power supply is connected directly without a load, the internal elements may explode or burn. Be sure to insert a load when connecting the power supply.
- Please use gloves to protect yourself from injury caused by screw.
- For the connector type and pigtailed type, check the specifications of the connector cable to be used. Please do not use it under conditions that exceed the range of its specifications of both the product and the connector cable.
- Please make sure there is no foreign matter in connector part before connecting the connector cable to the connector type and pigtailed type.
- In the IO-Link mode, the cable between the IO-Link master and sensor must have a length of 20 m 65.617 ft or less.
